Dear all,

WRT the demo video, please focus on the following:

- **Do your demo using the JAR file by actually running the application, not using PowerPoint slides**.
- Have sufficient, realistic data in the application before the demo.

Introduce: (one or 2 members can do this)

- What is your product about?
- Who is your target user?
- What is the problem statement you are addressing?

Details: (ideally everyone takes part in the demo)

- As a courtesy, introduce yourself (though if you miss, it is OK!)
- Which part of the problem is your feature/command addressing?
- How to use your feature via what commands?
- If commands have different variations, show a few variations, no need to show everything

What you can possibly skip:

- No need to show many negative examples; one or two is OK.
- No need to cover implementation or design details unless you did something really unique.

Stick to the time limit specified [here](#).

Again, I want to iterate:

- Don't spend time beautifying your demo. As long as it is clearly explained and we can see the screen recording properly, that is enough.
- No need to show your video editing prowesses. It will not earn you any more marks (instead, you spend valuable time editing the video!).

WRT allowing earphones:

- If it is absolutely necessary to use earphones during PE, please inform me beforehand.
- For the final exam, in general, earphones/headphones are not allowed.

Thanks,
Akshay
